Role Hub and Industry Sub-Page Plan

One full page for every senior role, with a sub-page under it for each industry. Each page is long, specific and built to compete with a well-designed website.

Goal	What it means
One rule	One role = one hub page. The CEO hub is a complete mini-website about how KOV works with CEOs.
Industry sub-pages	Each industry listed on a hub opens its own sub-page explaining how that role works in that industry.
Cover everything	Every senior role and every industry is covered, built in phases so quality is checked before scaling.
Not look-alike	Each page is built from its own research sheet. A build check rejects pages that overlap too much.
Same brand	Same header, footer and design components as the home page, with interactive elements.
Machine-ready	Each page ships with its own SEO, GEO (generative engines) and AIO (AI overviews) assets.

1. The philosophy

A senior candidate searches for their own role: 'CEO job search help', 'CFO career representation', 'how do recruiters source a CHRO'. One deep page per role answers that search better than many thin pages. The industry sub-pages then catch the more specific searches ('CEO job search in healthcare') and prove that KOV understands each field.

The NAICS and SOC research (2,125 industry records and 1,447 occupation codes) stays as internal documentation. It tells KOV where to niche and supplies the industry list. It is not published as directories, because bulky lists of codes do not help a buyer decide.

2. Site structure

```
/roles/                          Roles overview (lists every role hub)
/roles/ceo/                      CEO hub: the full page
/roles/ceo/healthcare.html       Sub-page: how CEOs work in healthcare
/roles/ceo/finance-insurance.html
/roles/ceo/legal-services.html   ... one sub-page per industry
/roles/chro/                     CHRO hub, same pattern
/roles/managing-partner/         Managing Partner hub, same pattern
```

Existing role pages (CEO, CFO, CTO, CMO, COO, VP and the themed ones) are upgraded into these hubs rather than duplicated. Old URLs redirect to the new ones.

Role hubs (starting list of 40, edited to match your clients)

Group	Roles	Hubs
C-suite	CEO, COO, CFO, CTO, CIO, CMO, CHRO, CISO, General Counsel / CLO, Chief Revenue Officer, Chief Product Officer, Chief Strategy Officer	12
Board and ownership	Board Director, Non-Executive Director, Chair, Managing Director, Managing Partner, Partner	6
VP level	VP Sales, VP Marketing, VP Engineering, VP Operations, VP Finance, VP People, VP Product, VP Strategy	8
Director level	Director of Operations, Finance, Engineering, Marketing, Sales, People, Product, Legal	8
Heads of function	Head of Legal, Head of Growth, Head of Strategy, Head of Data and AI, Head of Compliance, Head of Business Development	6
Total		40

Industries under each hub (21)

Agriculture, Food and Forestry	Energy, Mining and Oil and Gas	Utilities
Construction and Engineering	Manufacturing	Wholesale and Distribution
Retail and E-commerce	Transportation and Logistics	Technology, Media and Telecom
Finance and Insurance	Real Estate and Leasing	Legal Services
Consulting and Other Professional Services	Holding Companies and Corporate Groups	Business Support and Facilities
Education	Healthcare and Social Care	Arts, Entertainment and Sports
Hospitality and Food Service	Other Services	Public Sector and Government

These are the 20 NAICS sectors, with Legal Services split out of Professional Services because it is KOV's core field. Narrow roles (directors, heads) get only the industries where the role really differs, so they will have fewer sub-pages.

Scale: 40 hubs and at most 21 sub-pages each is up to 840 sub-pages. A realistic final figure is 400-600, because narrower roles need fewer industries. These are planning estimates, not forecasts.

3. Anatomy of a role hub (CEO as the example)

Every hub follows this order. The sections stay the same; the content comes from that role's own research sheet.

#	Section	What goes in it
1	Answer block	60-80 words at the top: what KOV does for CEOs and who it is for. The passage AI engines quote.
2	Hero and proof strip	Title, breadcrumb, 4 sourced facts, consultation button.
3	How KOV works with CEOs	The engagement from first contact to offer: intake, positioning, outreach, negotiation. What the CEO does and what KOV does.
4	How we treat CEO documents	Executive resume, board biography, achievement summary, LinkedIn. How each is built for a CEO, how confidentiality is handled, who sees what and when. Before and after examples (illustrative).
5	How the CEO role works	Mandate, reporting to board, investors or owners, what makes the role different from COO or Managing Director.
6	Where CEOs work	Interactive industry cards (21). Each opens its own sub-page. Filter box and short one-line teaser per card.
7	How CEOs operate in a job search	Discretion, the hidden market, board and shareholder involvement, timelines, search-firm relationships.
8	How recruiters treat CEOs	How they source, shortlist and endorse. What they look for. What makes them drop a candidate. Written from the recruiter's side.
9	Career presentation	Positioning, narrative, proof points, public profile, interview preparation.
10	Private career representation	Step-by-step, with a timeline graphic, scope, confidentiality and what KOV does not do.
11	Common mistakes	6-8 mistakes CEOs make when applying, each with the fix.
12	Regional notes	Tabs for Saudi Arabia, UAE, UK, US, Australia, Africa where facts support it.
13	FAQs	8-12 questions unique to the role, answers in the page HTML.
14	Related and CTA	Sibling roles, matching services, markets, confidential consultation button.

Target length: 3,000-4,500 words per hub, plus interactive elements. That is enough to stand as a website on its own.

4. Anatomy of an industry sub-page (for example, CEO in Healthcare)

#	Section	What goes in it
1	Answer block	How the CEO role works in this industry and how KOV supports a CEO moving within or into it.
2	How the role differs here	Regulators, licensing, boards, payers or owners, typical company structures, what a CEO is accountable for.
3	How companies hire CEOs here	Search firms, board networks, referrals, timelines, common routes in.
4	What recruiters and boards look for	Screening criteria for this industry, and the red flags.
5	Document emphasis	What to put first in the resume and board bio for this field. Illustrative before and after.
6	Mistakes specific to this industry	3-5 mistakes with fixes. Not copied from the hub.
7	Regional notes	Differences by market where real facts exist.
8	FAQs	5-8 questions only this sub-page answers.
9	Related links	Parent hub, 2-3 nearby industries for the same role, same industry under 2-3 related roles, one service page.

Target length: 1,500-2,500 words.

5. Design and interaction

The goal is a page that feels like a designed website, using the home page's header, footer, containers and style tokens.

- Sticky table of contents with a reading-progress bar; collapsible on mobile.
- Interactive industry cards with a filter box and hover previews, each opening its sub-page.
- Tabs for regional notes; accordions for FAQs (answers present in the HTML so crawlers see them).
- Process timeline for private representation; stat strip; callout boxes; before and after document panels.
- Comparison tables with sticky headers, built as plain HTML so every row can be crawled.
- Inline SVG graphics instead of heavy images; no new fonts; performance checked with Lighthouse each phase.
- A persistent, unobtrusive consultation bar. The wording follows your existing booking page.

6. How every page stays different

The template supplies layout only. All words come from a research sheet written for that page. For every role and industry pair the sheet holds:

- regulator or licensing gates and the typical board or ownership model
- how senior hires are sourced in that industry and what recruiters screen for
- which achievements and proof points matter most there
- 3-5 mistakes specific to the pair
- 2 sourced statistics (source and year) and any regional facts
- 5-8 FAQs not used anywhere else
- one illustrative scenario, clearly labelled as illustrative

Rules and build checks

- Build fails if a page is below its word minimum, repeats a FAQ question from another page, or shares more than about 30% of its body text with any other page.
- No statistic without a named source and year.

- No invented testimonials, client results or reviews. Examples are labelled illustrative or composite and are never presented as real clients.
- If an industry has little to say for a role, the sub-page is merged into the hub or left out, not padded.

7. The SEO, GEO and AIO assets for each page

Layer	Per page	Site-wide
SEO	Unique title, meta description and H1; canonical; Open Graph and Twitter tags; BreadcrumbList; descriptive internal links.	sitemap.xml split by section (roles, industries under roles), correct lastmod; robots.txt.
Structured data	JSON-LD: WebPage, BreadcrumbList, FAQPage, Service (KOV's offer). Organization with sameAs linked by @id.	Organization and WebSite entity on the home page.
GEO	Answer block in the first screen, short self-contained definitions, named entities, sourced facts with year, a Markdown copy of the page at /ai/{slug}.md.	llms.txt listing the role hubs; llms-full.txt with full text of the hubs.
AIO	Question then 40-60 word answer; step lists; comparison tables; visible 'last reviewed' date.	Consistent facts about KOV across every page.
Data	One record per page in /data/pages/{slug}.json that drives the HTML, the schema and the Markdown copy, so all three match.	Validator extended to every new page; build report listing failures.

llms.txt is one file at the site root. The per-page equivalent is the Markdown copy plus the page's own JSON-LD and data record.

8. Internal linking

- Roles overview > every hub. Hub > its industry sub-pages. Sub-page > parent hub and nearby pages.
- A role's industry sub-pages link to the same industry under related roles (CEO in Healthcare to COO in Healthcare).
- Every page links to one service page and one market page. Service, pricing and contact pages link back to the roles overview.
- Breadcrumbs everywhere. Every page is within 3 clicks of the home page.

9. Rollout in phases

Everything gets covered. Phasing protects the result, because each phase shows what Google does with the pages before you build the next.

Phase	Build	Pages	Gate to move on
0. Foundation	Hub and sub-page templates, components, data schema, research-sheet format, validator, Markdown and schema generators, redirects from old role pages.	0 new	Template passes the validator on 3 sample pages
1. CEO cluster	CEO hub plus 21 industry sub-pages. Legal Services first.	22	Indexed; impressions appear in Search Console (2-3 weeks); quality review
2. Other C-suite	11 more C-suite hubs, with sub-pages for the 8 most relevant industries each.	11 + about 88	No quality flags; sub-pages indexed
3. Board and ownership	6 hubs plus their sub-pages.	6 + sub-pages	Same
4. VP, Director, Heads	22 hubs with sub-pages where the role really differs.	22 + sub-pages	Same
5. Remaining sub-pages	Fill the rest of the 21 industries per role, ordered by Search Console demand.	by demand	Ongoing

10. Expectations and risks

Risk or limit	Handling
Hundreds of pages look alike	Per-pair research sheets, overlap check, merge or skip thin pairs, phase by phase.
Writing volume	Up to 840 sub-pages is a very large writing job. AI drafting is fine, but facts, statistics and examples need a human check before publishing.
Traffic expectations	More pages give more chances to appear. They do not guarantee 20,000-50,000 daily visits. Visits depend on indexing, rankings and backlinks.
No backlinks	This plan does not create them. Plan guest articles, podcasts, legal and executive publications and LinkedIn articles alongside the build.
Generator rewrites existing pages	Generate only new slugs. Do not run the site-wide generator over existing pages. Restore unrelated files after each run.
Uncommitted taxonomy and directory work	Keep data/taxonomy as internal documentation. Do not publish the industries/ directory or SOC group pages. Remove them from the sitemap, llms.txt and the search index. Keep .vscode and __pycache__ out of commits.
30 split FAQ pages may be thin	Check them in Search Console. If not indexed or no impressions, merge into fuller FAQ pages with redirects.

11. Next steps

- Approve the role list and the 21 industries (add or remove to match your clients).
- Write the CEO hub copy and one sub-page (CEO in Legal Services) as the quality sample.
- Build Phase 0, then Phase 1 (the CEO cluster).
- Review Search Console after 2-3 weeks before starting Phase 2.
